CERTIFICATE OF ABSENCE OF GMO & GAMMA IRRADIATION

Peptidase S (*Aspergillus melleus*)

To Whom it May Concern:

The material contains Peptidase S from fermentation, standardized with potato dextrin, in addition to maltodextrin from corn. Enzymology Research Center, Inc. only sources Peptidase S produced from Non-GMO fermentation. The potato dextrin is from a Non-GMO source. The maltodextrin used may be from a GMO corn source; however, during the production of maltodextrin, the corn DNA is denatured, degraded, or removed. Therefore, corn DNA should not be present in measurable amounts in the maltodextrin used, or in the final Peptidase S product.

We further declare that the product is not treated with ionizing radiation (gamma rays) or with ethylene oxide (ETO).
